

HIGHLIGHTS: As we enter the traditional peak of the Atlantic Hurricane Season (June 01st –November 30th), residents of St. Vincent and the Grenadines are urged to closely monitor official weather updates and forecasts. Be PREPARED! View various bulletins and outlooks issued by the Caribbean [Regional](#) Climatic Centre (Health, Agriculture, Heat Outlook etc.) Read the Caribbean Agro-Climatic bulletin of [CariSAM](#) and other national bulletins.

Fig 1: Rainfall Stations

KeyFig1	Station-Location	Rainfall (mm)
●	Argyle Int'l - Airport	84.6
●	E.T Joshua-Arnos Vale	107.9
●	Belle Isle	142.4
●	Rabacca	47.7
●	Belmont Agri.	131.4
●	Rivulet Climo.	78.3
●	Dallaway	222.2
●	Owia	23.7

Tables 1&2: July, 2026: Rainfall across SVG.

The **highest maximum temperature**, 31.1°C, was recorded on the 28th; while the **lowest minimum temperature** was 20.9°C, recorded on the 10th.The **Average maximum temperature** was 29.8°C and **Average minimum temperature** was 23.8°C. **Average daily mean temperature** was 26.8°C.

The **maximum wind gust** for July is currently unavailable.

Table 4: Aug-Sept-Oct 2026 usual range of rainfall (between lower and upper threshold values) .

National Rainfall Outlook:Aug-Sept-Oct 2026 for SVG

- Rainfall is likely to be the usual or below.
- There is a potential for drought conditions to develop across SVG during the upcoming months

Fig 2: Regional Precipitation Outlook for Aug-Sept-Oct 2026

Advisory Statements

Water: As we enter the traditional peak of the wet/hurricane season, water availability may be disrupted as weather systems pass. During these disruptions, residents are advised to store adequate quantities of water

Health: As warmer than usual temperatures are expected to continue in the upcoming months, the general public is advised to remain hydrated during warm days. Saharan dust events may persist; therefore, attention should be placed on monitoring and providing timely updates to reduce the risk of exacerbations of respiratory illness in vulnerable individuals. Additionally, because warmth and localized rain favours mosquito breeding, fogging operations should continue to mitigate vector-borne diseases.

Agriculture: Farmers should pay attention to weather bulletins in the months ahead and secure their equipment, crops and livestock as necessary. Irrigation measures should be practice as there could be periods of little to no rainfall. Due to the predicted warmer than usual temperatures, farmers are also advised to remain hydrated while working outdoors and provide adequate water and shading for seedlings and livestock during warm days.

Tourism: As we enter the peak of the hurricane season, outdoor activities may be disrupted at times due to an increase in rainfall activity. During warm days, visitors should remain hydrated and be mindful to minimize skin exposure and wear sunscreen protection. Avoid the frequent rough sea swells during this time of the year. Visitors should also be aware of the frequency of Saharan dust episodes during this period as it can pose respiratory concerns.
